

SUMMER 2012

New Addition to Viper II Line: Viper VaporCheck II Under-Slab Vapor Retarder

NEW PRODUCT!

We have added another product to our Viper II line of products. ISI now offers Viper II 6-mil Class C. In addition to the Viper II 10-mil Class C, 10-mil Class A and 15-mil Class A, the 6-mil vapor retarder will offer protection against moisture and give you an economical option for your residential and light commercial construction needs.

THE FIRST LINE OF DEFENSE WHEN PROTECTING YOUR CONCRETE SLAB IS THROUGH THE USE OF A HIGH PERFORMANCE UNDER-SLAB VAPOR BARRIER.

Unprotected concrete slabs (slabs without high performance vapor retarders/barriers) gain moisture vapor, through vapor diffusion, from sources below the slab. This moisture migration creates a conflicted environment for the floor coating or adhesive. The first

line of defense when protecting your concrete slab is through the use of a high performance under-slab vapor barrier. Viper II is uniquely manufactured to incorporate superior resistance against punctures, tears and water vapor.

Product Spotlight: Nu-Age Construction Films

Nu-Age Films are the future of plastic film/sheeting for construction, industrial and agricultural applications. Unlike other film/sheeting materials, Nu-Age Films are

designed and manufactured utilizing prime virgin resin. These films also contain outstanding performance levels and weigh less per roll when compared to standard plastic film/sheeting.

Insulation Solutions joins the Blue Book Construction Network

The Blue Book Building & Construction Network is the leading commercial construction search engine in the country. The company originated in 1913 in New York but the site itself officially launched in 1997 and has been adding new ways to provide a source for Architects, Engineers, Contractors, Suppliers and Manufacturers.

BPM Select is the premier building product search engine that is accessible on Blue Book's website. By using BPM Select, you can enter your product search term to find exactly what you are looking for. BPM Select enables you to save, sort and share your product information...your way!

AIA Expo: Washington, D.C. Show Hi-lights

Insulation Solutions recently exhibited at the 2012 AIA (American Institute of Architects) Expo. The event was held at the Walter E. Convention Center in our Nation's Capital, Washington D.C., May 17th - 19th. The AIA National Convention & Design Exposition brings together principals, partners and other top level leaders. We displayed many products, but our featured product was our under-slab vapor barrier, Viper VaporCheck II.

Not at the show? Check out some of the products we displayed by going to www.insulationsolutions.com.

Summer Special Price: Insullite Pro Plus Recessed Light Covers

We are having a Summer Special on the Insullite Pro Plus, our metal recessed light covers. Available in vented and non-vented, the Insullite Pro Plus offers ultimate protection against fire caused by heat build-ups due to insulation installed over or too close to recessed lights and other heat producing fixtures. The cover is quick and easy to install by the professional or do-it-yourselfer and is used with all types of insulation, cellulose, fiberglass and rockwool.

Contact Cara Paul for more details and get your **SPECIAL SUMMER PRICE!**
