## Recycled Content in Insul-Tarp®

Insulation Solutions® provides cutting-edge insulation products and accessories to a variety of industries. The design and ingenuity of these products reflects our mission: to change insulation challenges into practical solutions using science, research, and technology.

The Leadership in Energy and Environmental Design (LEED) Green Building Rating System™ is the nationally accepted benchmark for the design, construction, and operation of high performance green buildings. LEED gives building owners and operators the tools they need to have an immediate and measurable impact on their buildings' performance. LEED promotes a whole-building approach to sustainability by recognizing performance in five key areas of human and environmental health: sustainable site development, water savings, energy efficiency, materials selection, and indoor environmental quality.

The following is a break down of the recycled material in Insul-Tarp®:

**Total Percentage of Recycled Material = 40%**

Bubble=50%

Foam=30%

Cross Woven Poly=10%

For more information on the LEED rating system check out the following link:
